

Arif Yilmaz
Senior Business Intelligence Analyst

How did you end up at Wolters Kluwer?

I came to the Netherlands in 2020 to work as a Postdoctoral Researcher in Data Science in Academics. Part of my research involved working with legal decision support systems. For example: I implemented an AI tool like a 'virtual judge', that trains itself from previous court decisions, then one can predict the outcome of a case. A recruiter reached out to me about a position involving Generative AI and law, which aligned well with my research experience. It turned out to be a job at Wolters Kluwer. This opportunity to apply my skills in a widely used product was appealing, leading me to join Wolters Kluwer as a Senior Business Intelligence Analyst at Schulinck. It appeals to me that what we develop here is directly used by our customers, but also that we can help them with their problems. I started at Wolters Kluwer in August 2023.

What are your tasks?

As a Data Scientist I am primarily concerned with developing decision support tools using AI and Big Data analytics. I use extensive data in different in Legal Knowledge Bases and develop solutions using LLM models as such GPT-4 and LLAMA as well as fine tuning these models on our data using Azure Cloud. I also perform and develop extensive analytics solutions about our products on Google Cloud for decision supporting needs of the management as well as interested teams who develop and use the knowledge bases.

What do you do in your daily work that will help municipalities directly?

I am working to identify and create innovative AI applications that can empower both experts in Schulinck and users at municipalities. I collaborate with IT and editorial teams to innovate use cases that support experts and product users. This ultimately leads to an improved experience for users at municipalities.

What makes working at Wolters Kluwer fun?

At Wolters Kluwer, employees enjoy working with cutting-edge technology and tools, fostering innovation and personal growth. The company's emphasis on teamwork and collaboration creates a dynamic and enjoyable work environment. We all bring our specialties and that makes us a good team. Coming from abroad, I make the team an international one. I try to learn Dutch, but my colleagues easily switch to English when necessary.

What do you do in your spare time?

In my free time, I enjoy cycling, playing sports like table tennis and padel, and spending time with my family. I also find joy in tinkering with tech hobby toys like Raspberry Pis, Arduinos, Robots and 3D printers.
